

Lecture - 13 (MIS)

Levels of management:

makes us understand

- who the users are
- what info. they need

① Day-to-day operation decisions

① Tactical decisions for 2 years

① directions for 5+ years

② Programmed desns

② Non-programmed

② Non-programmed

③ predetermined by rules and procedures

③ not predetermined

③ not pre-

Lower

Middle

Senior

④ needed info

found by administrative data processing activities

④ needed

info must be specific

⑤ Lead to desired result

includes

⑤ uncertainty

a) plan working capital

b) schedule prod.

c) formulate budgets

d) make short-term forecast

done by
middle
mgt.

⑥ structured
decsns

⑥ Semistructured

⑥ Unstructured

⑦ Supervisory/
operative
level

⑦ Executive level

⑦ Administrative/
managerial level

* Why are top and middle levels of mgt
are combined?

1. Integration

2. Coordination

3. Communication

4. Decision Making

5. Control

6. Planning

7. Organizing

8. Staffing

9. Directing

10. Evaluating

11. Improving

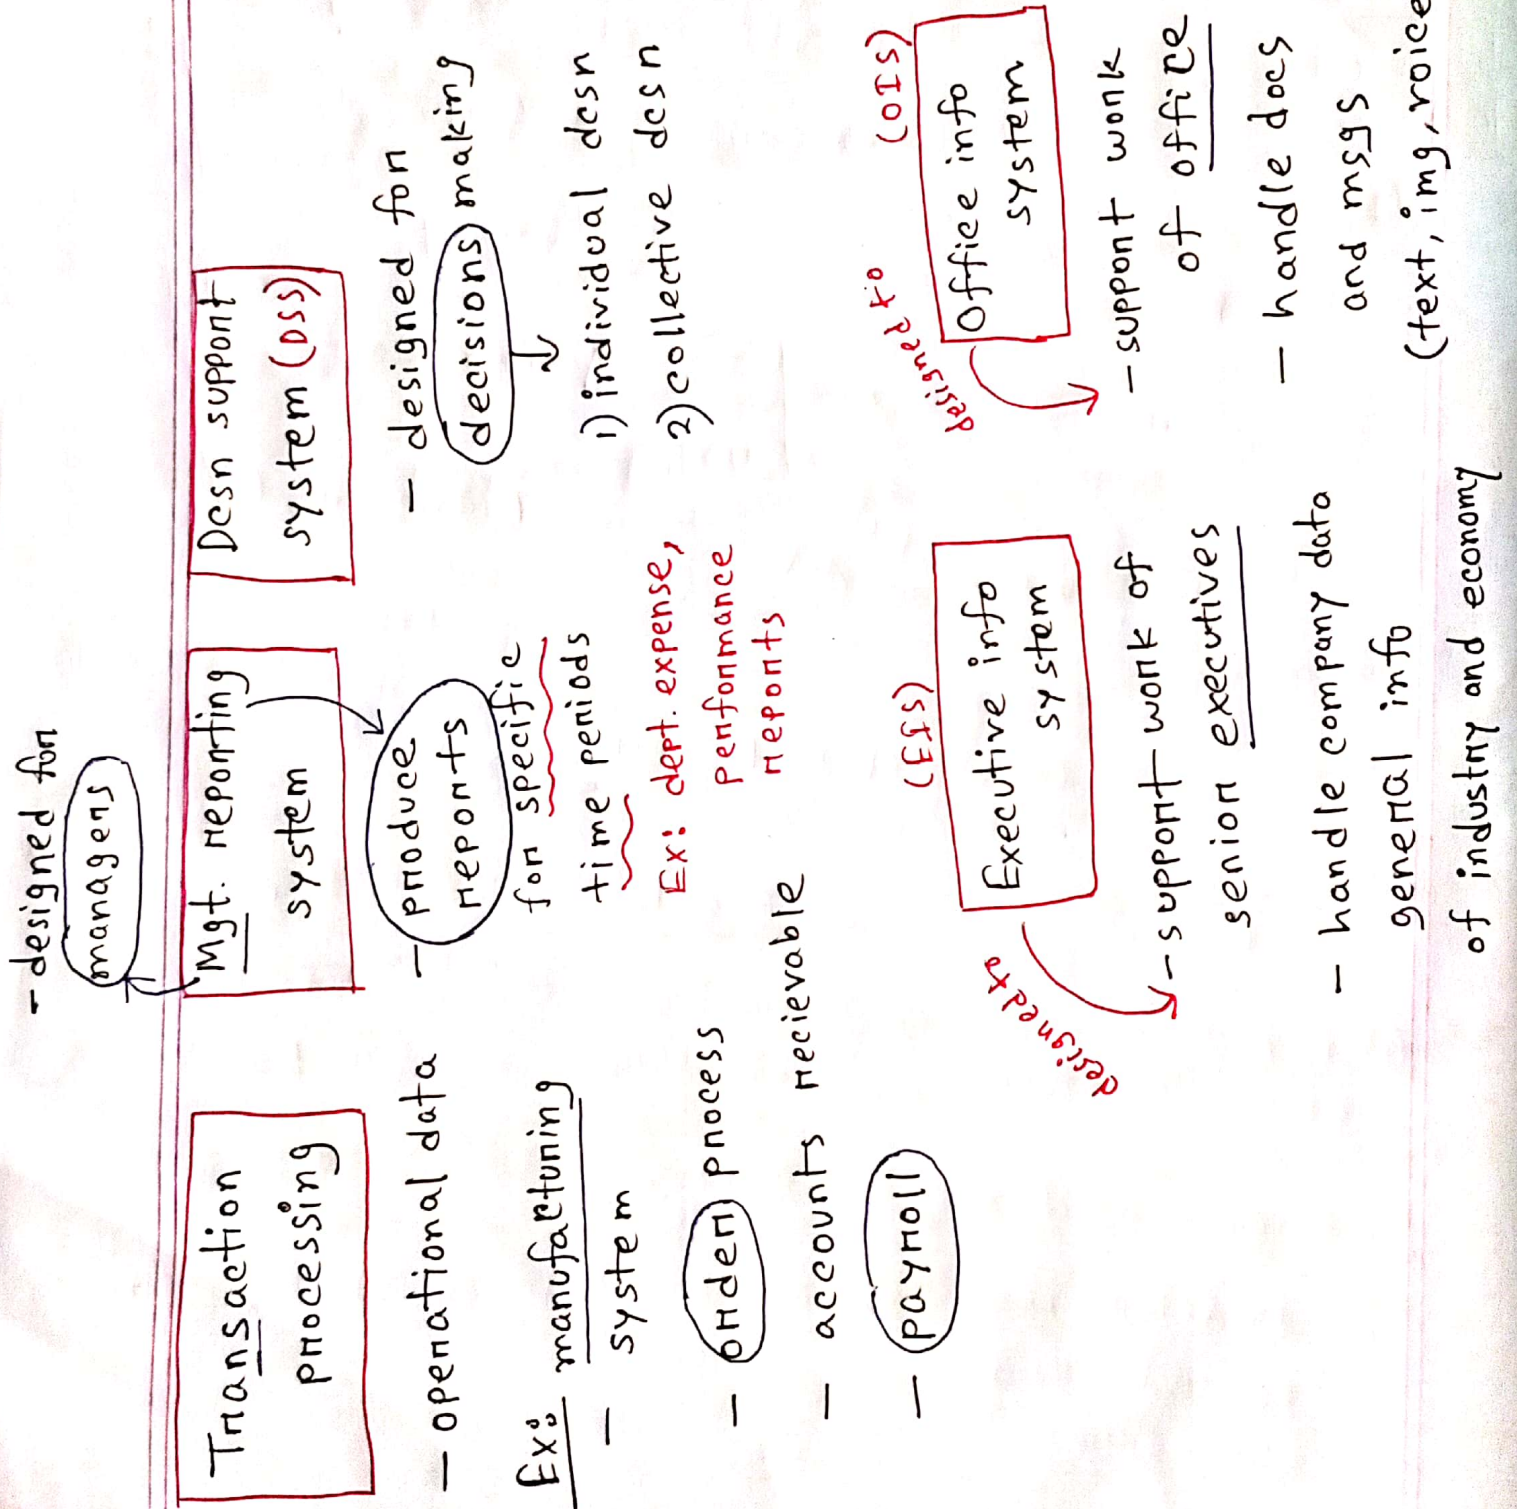

12. Maintaining

13. Developing

14. Implementing

Lecture 14

What do info systems do?

Q 3 components of info system:

Technology

- Computers
- Telecommunications
- databases
- expert systems

Organization

- structure
- mgt. style
- culture

People

- cognitive style
- individual characteristics
- edu. level

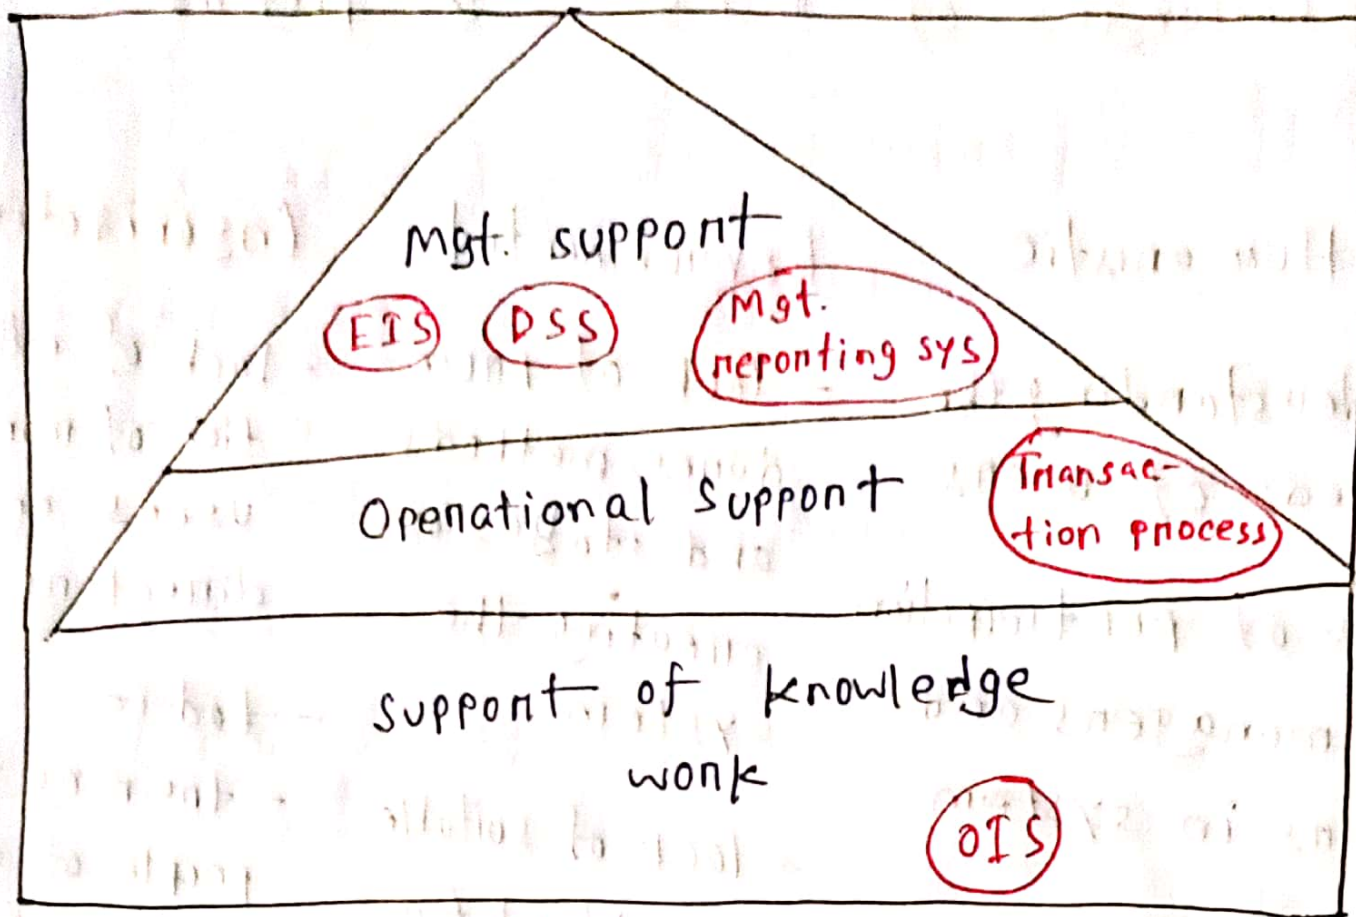

Q 7 Disciplines contributing to the field of MIS:

- 1) cognitive science
- 2) computer science
- 3) mgt and org. theory
- 4) mgt. science
- 5) Acc.
- 6) Systems theory
- 7) Sociology

Levels of behavioral study

Increasing order

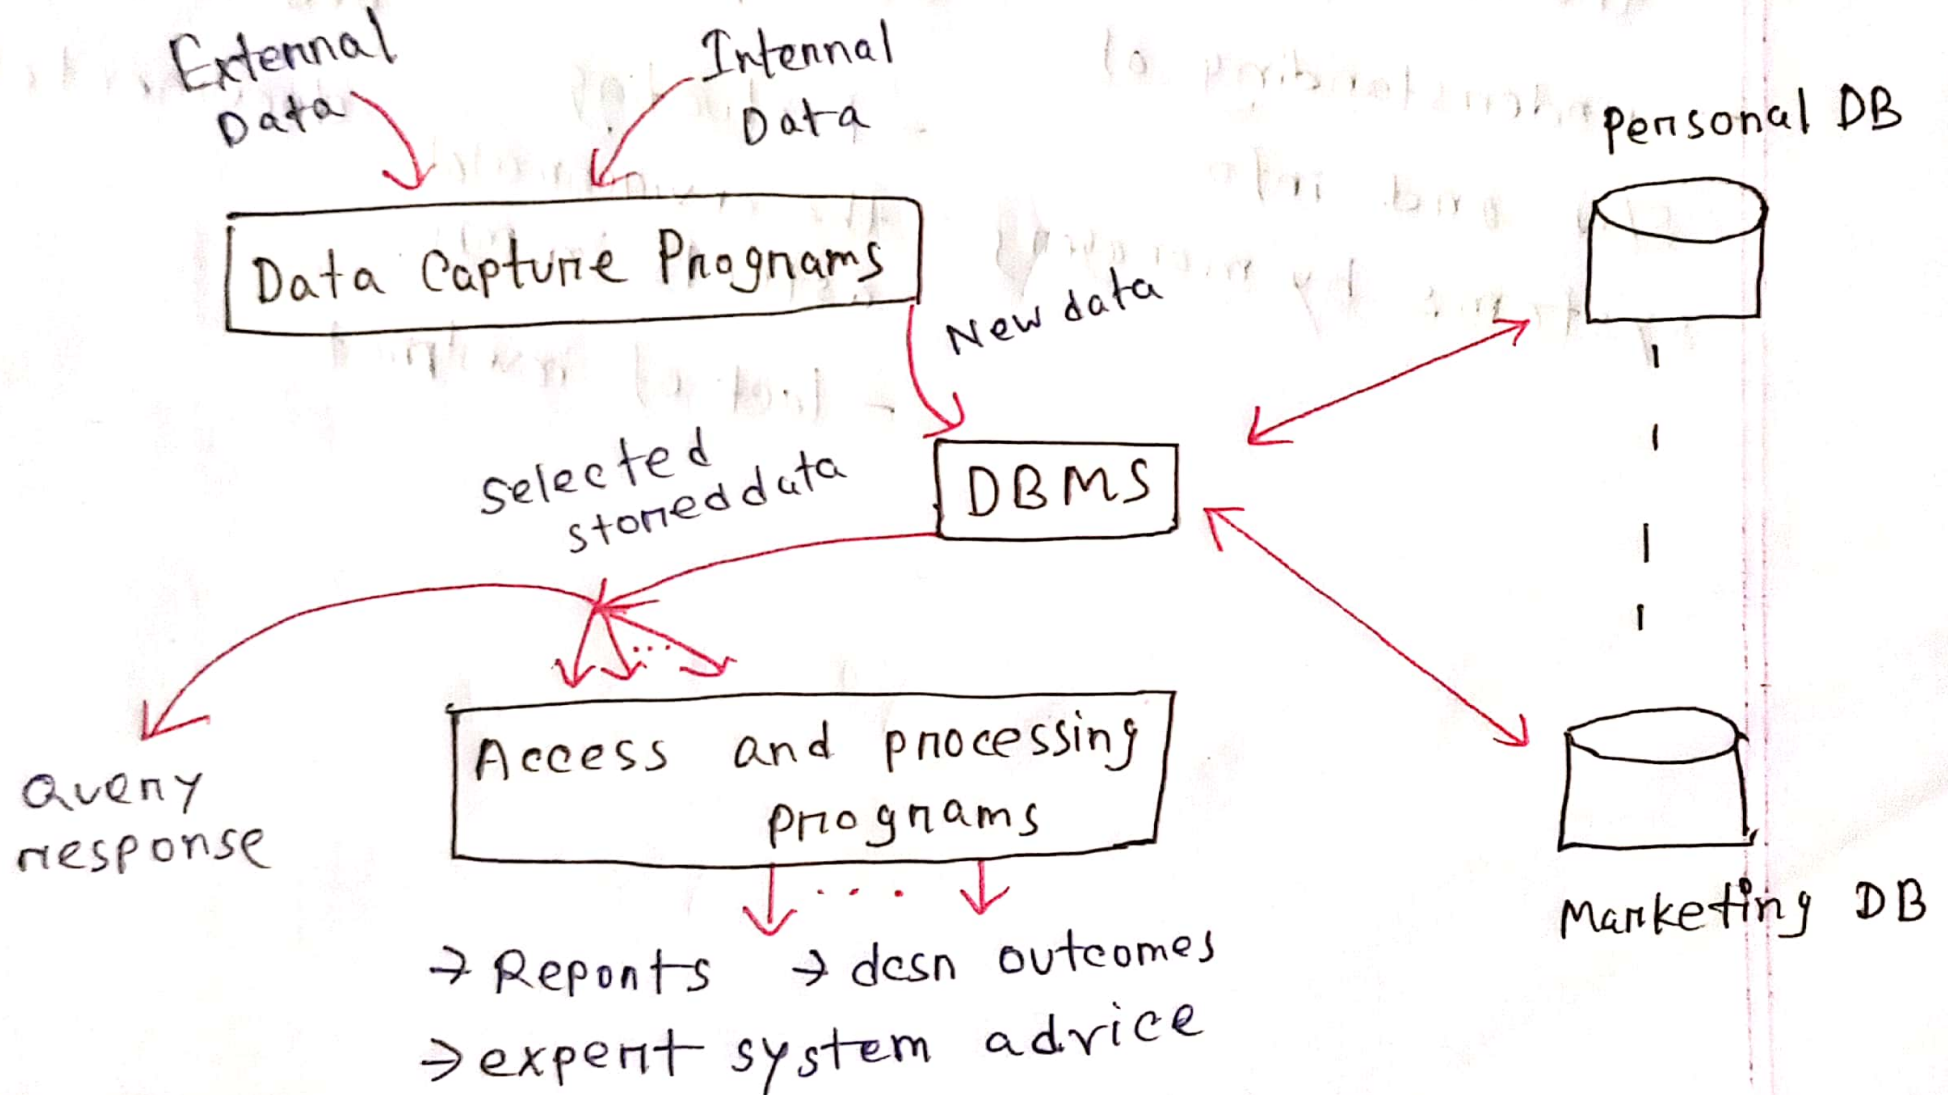

- 1) Individual → cognition and motivation
 - 2) Team
 - 3) Project
 - 4) Company
 - 5) Business milieu
- Group dynamics
- organization behavior
- Principal object of study
-
- ```
graph TD; A((Principal object of study)) --> B[cognition and motivation]; A --> C[Group dynamics]; A --> D[organization behavior]; B --> E[Individual]; C --> F[Team]; C --> G[Project]; D --> H[Company]; D --> I[Business milieu];
```

Intenonizational systems

Fig  
1

## \* Challenges of MIS : 3 Factors

### Humanistic

- Understanding the needs of users
- lack of participation of managers and users in system design
- inaccuracy of the collected data
- understanding of S/W and info systems by managers

### Environmental

- lack of procedures, methods and stages of creating the system
- lack of suitable consultants for designing S/W and system
- Evaluating the environmental aspects in MIS.
- lack of investment

### Organizational

- lack of collaboration of managers, users and system directors.
- ~~- bad co~~
- training the people of org. sections
- inadequate and incomplete documentation
